

Name: _____ Date: _____ Core: _____

Transportation

Bella's class is discussing different modes of transportation in the universe. Some examples they discussed are cars, trucks, trains, airplanes, boats and even the Earth moving around the Sun. Bella wonders what forces are involved in the different modes of transportation in our universe. Some of her friends shared their opinions. Please read their responses below.

Trixie: A push or pull is what allows transportation to take place.

Silvan: Everything is a magnet and can move because of magnetic forces.

Rosetta: Gravity holds everything together and causes all of the movement of objects in the universe.

Alex: Electric forces run through all of our bodies and all objects in the universe.

Cameron: Transportation involves multiple forces including gravity, magnetism and electricity.

Choose the student that you believe has the best response and an explanation of their thoughts.
